

SYSPRO Espresso mobile application

SOLUTION FACTSHEET

The SYSPRO Espresso mobile application is an App Store application which connects to SYSPRO and provides a mobile platform for accessing all your SYSPRO business data remotely. SYSPRO Espresso provides over 60 out-of-the-box applications that work on any popular mobile device, providing live access to information about your contacts, customers, suppliers, inventory as well as operational management information.

SYSPRO Espresso has built in low and no-code power tailoring and customization capabilities, that enable you to change the user interface and experience to suit different use cases and end users.

The benefits of SYSPRO Espresso mobile application:

Enables remote working

- SYSPRO Espresso's is a device agnostic application available from any App Stores. Granting remote workers the ability to bring their own devices (BYOD) to connect to SYSPRO and perform their functions remotely on a secure, reliable platform.

Simplicity built-in

- The user interface and experience is simplified for mobile user access, with smooth processing and uncluttered screens, our mobile application is the easiest to use when transacting in SYSPRO.

Visually appealing

- SYSPRO Espresso inherits all of the rich media and imagery that you've added to SYSPRO, ensuring a visually appealing experience for searching and selecting inventory, customers and supplier information.

Scanning enabled

- Built to enable scanning (on scan enabled devices), helping optimize data entry speed and accuracy, preventing inaccuracies and improving stock and order accuracy.

Executive analysis

- Included in Espresso are executive analytic summary applications, granting access to high level business information to improve decision making on the move.

Offline capabilities

- Offline resilience is built in to the solution, meaning that if you start a transaction online and lose connectivity, you don't lose any important data, and you can synchronize when you get your connection restored.
